SUMMARY

Data Science & AI Leadership

Seasoned data science leader with proven expertise in architecting advanced AI solutions, from custom RAG systems to natural language-to-SQL implementations. Track record of building and leading high-performing data science/ML teams, while driving innovation through custom model development, cloud-native architectures, and scalable AI frameworks.

Strategic Innovation

Architect of successful AI initiatives including organization-wide AI training programs, AI Proofs of Value/Concept, and cross-functional AI solution operating frameworks. Demonstrated ability to bridge technical capabilities with business domain expertise through workshops, technical deep-dives, and process mapping exercises.

AI Architecture & Design

Deep expertise in designing and implementing advanced AI architectures, including custom RAG systems, natural language-to-SQL solutions, and custom model development and deployment.

EXPERTISE

Specialized AI Expertise

Computer Vision, NLP, Time Series Analysis, RAG, Text-to-SQL

Programming Languages

Python, R, SQL, PowerShell, Terraform

Data / AI Platforms

Azure Machine Learning, SageMaker, Azure OpenAI, AWS Bedrock, DataRobot, Dataiku, Snowflake, Databricks

PROFESSIONAL EXPERIENCE

HEAD OF AI SOLUTIONS

TRACE3

Oct 2024 – Present

- Lead Trace3's AI Consulting & Technology team's AI Strategy and AI Solutioning teams, with co-lead responsibility for AI Governance and Risk.
- Serve as technical lead and senior escalation path for client project delivery.
- Serve as the first-level contact for Trace3's national sales organization for all customer-facing AI opportunities, providing orchestration across Trace3's various business units.
- Conduct opportunity scoping, statement of work creation, customer enablement workshops, use case identification workshops, and technical deep-dive discussions.
- Partner with Trace3's other business units to develop holistic AI solutions, inclusive of partner-specific offerings and program-level engagements.
- Develop Trace3's AI Go-to-Market strategy, strategic AI partnerships, and approach to solutioning.
- Develop new training and collateral to support Trace3's AI Legends program, providing organization-wide AI training.
- Present at Trace3-hosted Executive AI Summits.
- Act as a senior member of Trace3's Center of AI, providing guidance and direction for Trace3's internal adoption of AI.
- Lead a team of six (6) AI Solutioning consultants, data scientists, and solution architects.

PRINCIPAL DATA SCIENTIST

AHEAD

Apr 2023 – Oct 2024

- Led the expansion and refinement of AHEAD's data science offerings, strategically enhancing market presence and client engagement capabilities through innovative go-to-market strategies.
- Designed and scoped client projects, prioritizing rapid value through workshops and proof-of-value engagements.
- Led the execution of client-centric AI Use Case Workshops, guiding the end-to-end process from use case identification to the development and deployment of advanced models.
- Crafted the direction for AHEAD's Generative AI capabilities, including advanced solutions such as dynamic prompt routing, calibration datasets, and confidence prediction models within custom retrieval augmented generation (RAG) systems.
- Led advanced efforts around natural language-to-SQL Generative AI solutions, including the incorporation of data dictionaries and schemas to enhance translation efficacy and query result relevance.
- Created the AHEAD Data Science Community of Excellence, driving the creation and dissemination of internal intellectual property (IP), pioneering the development of cutting-edge AI solutions, providing organization-wide AI enablement, and setting new benchmarks in solution delivery.

PRACTICE MANAGER, ANALYTICS

CONVERGEONE (ONEC1)

Aug 2021 – Apr 2023

- Built and scaled ConvergeOne's national data and analytics consulting practice.
- Designed and executed C1's AI go-to-market strategy, strategic partnerships and expanding partner specializations and certifications to drive competitive advantage.
- Led webinars, lunch-and-learns, and envisioning workshops, engaging both external clients and internal teams to showcase cutting-edge data and analytics capabilities.

CERTIFICATIONS

Microsoft Certified Trainer
Microsoft

TensorFlow Developer
Google

Dataiku ML Practitioner
Dataiku

Dataiku MLOps Practitioner
Dataiku

Dataiku Core Designer
Dataiku

Dataiku Advanced Designer
Dataiku

DataRobot Sales Specialist
DataRobot

- Led pre-sales initiatives, focusing on data, analytics, and AI opportunities with a strong emphasis on public cloud platforms.
- Delivered technical leadership for complex client projects, emphasizing modern data platform architecture and the development of tailored machine learning solutions.

AZURE DELIVERY MANAGER
AHEAD

Sep 2018 – Aug 2021

- Provided technical guidance, career development, upskilling, and support for 16 infrastructure, data, and AI consultants.
- Led pre-sales opportunities focusing on analytics strategy, modern data architectures, and predictive analytics.
- Developed AHEAD's data-centric go-to-market offerings and internal upskilling programs.
- Provided monthly lunch and learn sessions and live demonstrations of machine learning applications.
- Provided support on client-facing data architecture and machine learning cloud projects.

AZURE & AI PRACTICE LEAD
PRESIDIO

Feb 2017 – Sep 2018

- Led infrastructure and AI proof-of-concept engagements with a focus on Microsoft Azure, driving the growth of Presidio's Azure national overlay team across pre-sales and post-sales capabilities.
- Delivered Azure Machine Learning demos, solution architecture workshops, and training sessions, while representing the organization at industry conferences.

CLOUD ARCHITECT
RIGHTPOINT

Aug 2016 – Feb 2017

- Designed and deployed a scalable cloud solution with Microsoft Azure for a global smart-home garage door organization, supporting over 3 million IoT connections.
- Established Azure deployment and documentation standards, pioneered the use of Operations Management Suite for internal DevOps, and migrated SQL Server databases to Azure SQL Databases.

WINDOWS SYSTEMS ENGINEER
AMELIA (IPSOFT)

Jan 2016 – Aug 2016

- Developed auto-remediation tasks for managed services clients and supported IPsoft's Amelia engineers in infrastructure and development initiatives.
- Acted as L3 senior escalation for the Windows team, overseeing daily monitoring, maintenance, and issue resolution for managed infrastructure.

SENIOR ENGINEER / CLOUD CONSULTANT
NPI (3D CORPORATION)

Jul 2013 – Jan 2016

- Managed over 50 client environments, specializing in the Microsoft stack, while leading technical projects, including migrations to Microsoft Office 365 and Azure.
- Delivered solution architecture design workshops, Azure Machine Learning demos, and training sessions, showcasing expertise at industry conferences and client engagements.

SIGNAL SUPPORT SYSTEMS SPECIALIST
UNITED STATES ARMY

Feb 2008 – Jul 2013

- Led a team of 4 system administrators as a non-commissioned officer, overseeing system uptime, application upgrades, and maintenance.
- Managed a comprehensive 'Business-in-a-Box' solution, including VMware ESXi, Cisco networking, NetApp Filers, and military-specific applications.

EDUCATION

Master of Science – Data Science (Artificial Intelligence) Northwestern University Research: COVID-19 Pneumonia and Influenza Pneumonia Detection Using Convolutional Neural Networks (arXiv:2112.07102)	2021
Bachelor of Science – Electronics Engineering ECPI University	2013
High School Diploma Morrison High School	2007

RECENT PROJECTS

Cybersecurity AI Insights Application **Clinical Asset Management Company**

- Delivered an AI use case workshop that led to proof of value for the organization's cybersecurity team.
- The organization's team lacked SQL capabilities on their team, but wanted the ability to ask ad-hoc questions about medical device vulnerabilities and impacted devices.
- Led the design and delivery of a text-to-SQL generative AI solution on Microsoft Azure-native services. Proved value successfully, leading to enhancement iterations and further growth of the tool to support other teams.

Vehicle Configuration and Time-to-Sell Optimization **Multinational Automotive Manufacturer**

- Client was seeking methods to reduce the number of unique vehicle configurations for the next model year of a specific line.
- Led the successful creation of a machine learning-based application for client's product team to generate thousands of feasible configurations, scoring each one by time-to-sell for dealerships across the United States.
- Provided insights into popular options and configurations that maximize revenue while minimizing time-to-sell, reducing overall configuration options for the next generation vehicle.

Player Breakpoint Prediction & Offer Propensity **Global Leader in Gaming Machines and Products**

- Delivered enablement of the DataRobot platform to client's overseas data science teams.
- Led modeling exercises for player breakpoint prediction and offer propensity analysis, with the intent of incentivizing customers to return to the casino.
- Developed a hybrid model deployment architecture and "model marketplace" design to resell models to customers of the client.
